

## **GENERAL INFORMATION ABOUT THE 2016 ASSESSMENT RATE TABLES**

This section provides a comprehensive listing of the 2016 assessment rates per \$100 payroll and industry classifications across Canada. The Standard Industrial Classification Guide (SIC), utilized by Statistics Canada, is used by Workers' Compensation Boards and Commissions (WCBs) as the framework for grouping industries. Strict adherence to the SIC Guide is not possible in this analysis because each jurisdiction deviates from the Guide in classifying industries. However, the SIC divisions and major groupings have been used to provide standardization and to facilitate cataloguing of industry classifications and assessment rates.

In the rate tables, an asterisk (\*) indicates coverage is by application (voluntary industry); an 'x' includes both compulsory and voluntary industries; a dash (-) indicates industry is not currently operating within the jurisdiction; SI means industry is self-insured; and N/C indicates not covered or excluded by Act or Regulations.

Also in the tables, there may be more than one rate amount for an individual industry description. For Manitoba, the two amounts are the low and high of a range, reflecting Manitoba's built-in experience rating system. In other jurisdictions, where two rates are shown for an industry description the WCB has two, or in a few cases, three, separate industries rated for the more general SIC industry description. The separation may be for hazard or activity distinction. The separation may be related to the operation being with or without servicing, repair, maintenance or installation. In some cases, the reason for the separate rates is the number of workers and in others the length of the bridge and the material used.

For specific information about the individual rates, ranges, and other details, the reader should refer to that WCB's classification and rate booklet, which is published annually and is available on most [Board or Commission websites](#). For detailed 2016 rates at each WCB, please see:
