# Data Submission and Analytics Committee Minutes

## Standards and conversion tables

Jilal reported updated occupation and industry codes have been added to the system. Testing is required prior to implementation this year. Alberta volunteered to test submitting using old codes (to be converted by the system) and also directly using the new codes. Nova Scotia will test submitting with old codes.

## Claim Definition

Jilal reported that a feasibility study has been conducted. Adding a flag to identify permanent disability claims without wage loss. Next step is to determine the priority level of implementing this request.

Addendum: No members present considered this a high priority to implement. Ian reviewed previous meeting minutes to try and identify which board(s) had originally raised this issue – no indication in last few years' minutes. New Brunswick thinks they might have been the source of this request as legislative changes were driving big swings in their hearing loss volume. This has been resolved from their perspective though. Based on this it does not appear that this is a high priority item and we recommend not proceeding with it at this time.

## Data Platform Enhancements

Jilal reported that a longer historical series of data is now available on the home page, and presentation of the data has been enhanced with an animated gif.

Self-serve updates of previous IRs and public release of previous IRs were investigated and shelved as hosting the additional data was not considered worth it given the specialized nature of the requests (unlikely to have value beyond the original requestor without modification).

## Novel Statistics and Measures

Alberta gave an overview of their daily COVID related reporting dashboard.
