

AWCBC All Committees Meeting
National Work Injury Statistics (NWISP) Committee
Data Submission and Analytics Subcommittee (DSAC)

Agenda Items

1. Standards and Conversion tables

Issue: Last year the committee agreed to adopt a new set of concordance tables for the current Statistics Canada NOC and NAICS standards. We agreed that AWCBC would use these tables to update the reporting standards to match Statistics Canada. Jurisdictions will not have to update their reporting but will have the option to do so.

Resolve: To confirm the implementation of this new process and discuss any outstanding questions or issues that committee members may have.

2. Claim Definition

Issue: Last year the committee agreed to investigate the feasibility of adding an identifier column for claims with a permanent disability but without time loss from work (e.g. hearing loss).

Resolve: To have Jilal present the results of that feasibility study and discuss next steps.

3. Data Platform Enhancements

Issue: A number of potential data presentation platform enhancements were discussed last year.

Resolve: To have Jilal present a status update on his enhancement investigations and determine next steps. Potential enhancements identified were:

- Publishing a 10 year history of currently published statistics
- Making the results of previously completed information requests publically available
- Allowing self-serve updating of previous information requests (e.g. re-run a 2017 IR with 2018 data)
- Additional aggregated statistics/curated pivot table functionality

4. Novel Statistics and measures

Issue: Jurisdictions have developed various internally reported operating and financial statistics/measures that other jurisdictions may not be aware of but would find valuable.

Resolve: To use any remaining time in our meeting for a roundtable discussion of tools, techniques, measures, and statistics that we are using that may be of interest to other committee members.
